

New Claims

New claims 24-30 are added.

With respect to new **claim 24**, Applicant respectfully submits that the cited references do not disclose or suggest one or more computer-readable media having stored thereon a plurality of instructions that, when executed by one or more processors, cause the one or more processors to: decrypt an encrypted software module when a trigger file is stored on a computing system, wherein the trigger file comprises a prior version of the encrypted software module; and load the decrypted software module onto the computing system as recited in new claim 24. For at least these reasons, Applicant respectfully submits that new claim 24 is allowable over the cited references.

With respect to new **claim 25**, new claim 25 depends from new claim 24, and Applicant respectfully submits that the cited references do not disclose or suggest new claim 25 at least because of its dependency on claim 24. Furthermore, Applicant respectfully submits that the cited references do not disclose or suggest one or more computer-readable media as recited in claim 24, wherein the trigger file consists of only data other than a decryption key for decrypting the encrypted software module as recited in new claim 25. For at least these reasons, Applicant respectfully submits that new claim 25 is allowable over the cited references.

With respect to new **claim 26**, new claim 26 depends from new claim 24, and Applicant respectfully submits that the cited references do not disclose or suggest new claim 26 at least because of its dependency on claim 24.

Furthermore, Applicant respectfully submits that the cited references do not disclose or suggest one or more computer-readable media as recited in claim 24, wherein the plurality of instructions further cause the one or more processors to load a different version of the software module onto the computing system when the trigger file is not stored on the computing system as recited in new claim 26. For at least these reasons, Applicant respectfully submits that new claim 26 is allowable over the cited references.

With respect to new **claim 27**, Applicant respectfully submits that the cited references do not disclose or suggest a method comprising: checking whether at least one of a set of one or more trigger files is stored on a computer; if at least one of the set of one or more trigger files is stored on the computer, then: decrypting an encrypted restricted software module, and installing the decrypted restricted software module on the computer; and if at least one of the set of one or more trigger files is not stored on the computer, then installing a non-restricted version of the restricted software module as recited in new claim 27. For at least these reasons, Applicant respectfully submits that new claim 27 is allowable over the cited references.

With respect to new **claim 28**, new claim 28 depends from new claim 27, and Applicant respectfully submits that the cited references do not disclose or suggest new claim 28 at least because of its dependency on claim 27. Furthermore, Applicant respectfully submits that the cited references do not disclose or suggest a method as recited in claim 27, wherein the restricted software module comprises a domestic strength cryptographic software module as recited in

new claim 28. For at least these reasons, Applicant respectfully submits that new claim 28 is allowable over the cited references.

With respect to new **claim 29**, new claim 29 depends from new claim 27, and Applicant respectfully submits that the cited references do not disclose or suggest new claim 29 at least because of its dependency on claim 27. Furthermore, Applicant respectfully submits that the cited references do not disclose or suggest a method as recited in claim 27, wherein one of set of one or more trigger files comprises a prior version of the encrypted restricted software module as recited in new claim 29. For at least these reasons, Applicant respectfully submits that new claim 29 is allowable over the cited references.

With respect to new **claim 30**, new claim 30 depends from new claim 27, and Applicant respectfully submits that the cited references do not disclose or suggest new claim 30 at least because of its dependency on claim 27. Furthermore, Applicant respectfully submits that the cited references do not disclose or suggest a method as recited in claim 27, wherein each trigger file of the set of one or more trigger files consists of only data other than a decryption key for decrypting the encrypted restricted software module as recited in new claim 30. For at least these reasons, Applicant respectfully submits that new claim 30 is allowable over the cited references.

Conclusion

Claims 1-30 are in condition for allowance. Applicant respectfully requests reconsideration and issuance of the subject application. Should any matter in this

case remain unresolved, the undersigned attorney respectfully requests a telephone conference with the Examiner to resolve any such outstanding matter.

Respectfully Submitted,

Date: 1/24/03
